

SEBC Assignment 7 – from Terence Way & Philip Way

Part D

Our final project will be a photo management system.

We will be able to use a Web UI to access our photographs via a comprehensive search system, rather than having to search through all our photographs one at a time.

We will create a database that stores detailed information on each photo, with at least 2 tables.

Table one will consist of photo location, date, people, story/description, etc.

Table two will consist of people information

If need be, we'll create a third table for photo file links and storage.

Philip will handle the front end.

Terence will handle the back end.
